

ROIC.FINANCE

Investors Presentation

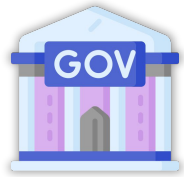

What is Blockchain Technology?

- Blockchain is an advanced mechanism for databases that allows transparent information sharing within a network. The database is stored in blocks linked together in a chain.
- The data is temporally consistent because the chain cannot be deleted or modified without consensus from the network. As a result, blockchain technology can be used to create an immutable or unchangeable ledger to track requests, payments, accounts, and other transactions. The system includes built-in mechanisms that prevent unauthorized transaction entries.

Blockchain Use Cases

Governments

- It is impossible to falsify the election results.
- Sign all documents with one button.
- Fast interaction at all levels.

Financial Services

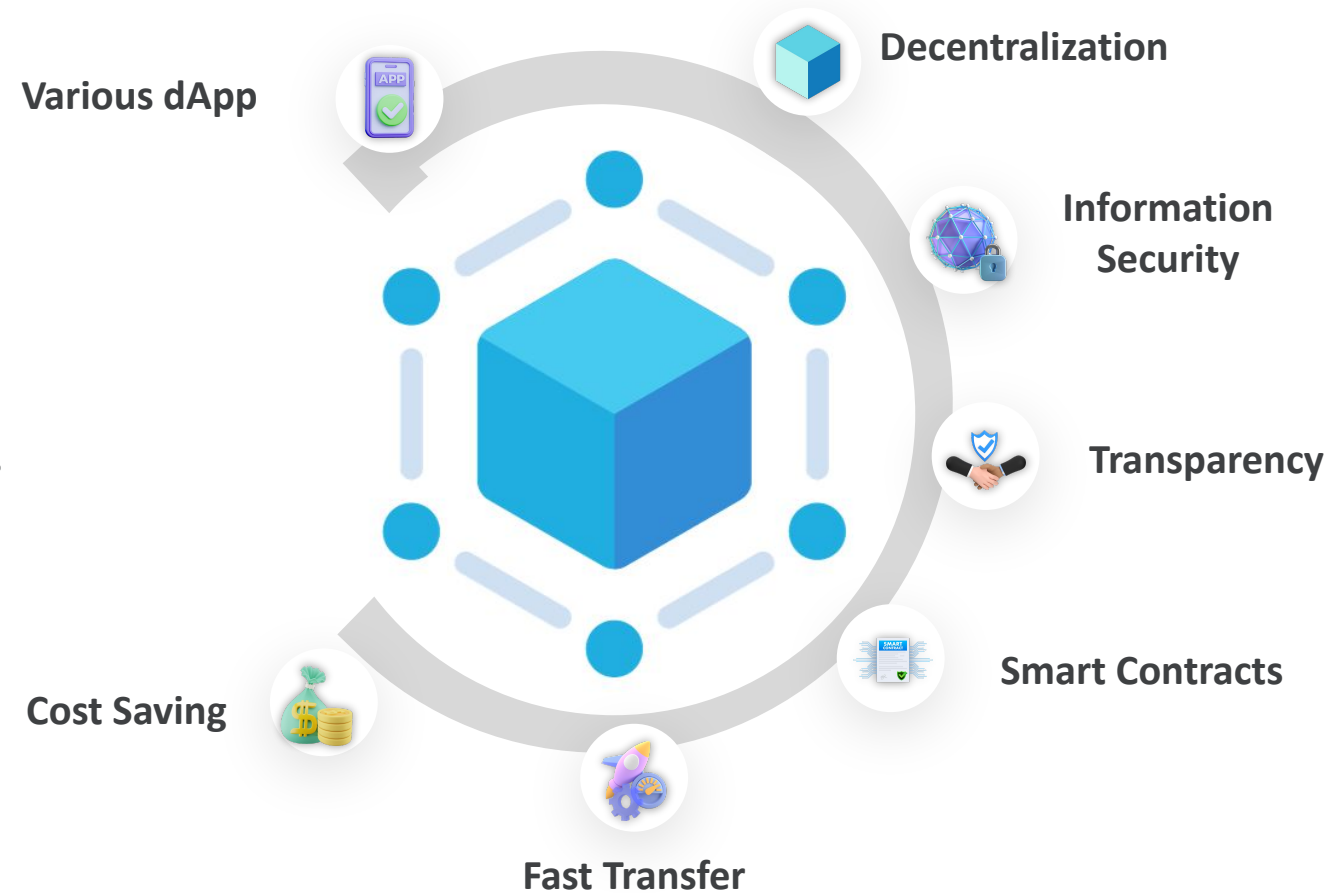

- Transaction speed is 3-10 seconds.
- The transaction fee is \$0.5-3, regardless of the amount.
- No intermediary is needed.

Health Care

- Inability to hide a medical error.
- Medical records are only available after consent.
- Ensure that data is never lost.

Key Characteristics of Blockchain:

Stake

Layer One

Decentralization

About VeneraChain

- VeneraChain is a blockchain project aimed at addressing current challenges within the blockchain, with a particular focus on privacy, scalability, and security. VeneraChain offers a range of features, including a private first-layer blockchain network, a unique financial aggregation system, decentralized stocks, and a referral program using a League-style staged approach. The technical structure covers the PBFT consensus mechanism, smart contract management, data encryption, and storage.
- The areas that must be considered include potential adoption challenges in the competitive market, the importance of education and awareness to attract users and developers, the need for continuous security measures, and the significance of community involvement in successful management.

Key features include the following:

- ✓ Focus On Privacy and Scalability.
- ✓ Data encryption and storage (AES-256).
- ✓ Consensus Mechanism (PBFT).
- ✓ Financial Aggregation.
- ✓ Node Management and Authentication.
- ✓ Decentralized Stocks.

The VeneraChain team aims to innovate a new solution to address the complexities faced by validators in traditional networks, enhancing efficiency and simplicity. This effort is geared towards increasing decentralization within the network.

About The ROIC Platform

- ROIC is a new platform created to support the VeneraChain network by attracting new projects and decentralized applications seeking to build on the network. ROIC platform also provides intelligent methods for staking the VCH token of the VeneraChain network.

ROIC Platform

- ✓ Aiming to attract new investors with a user-friendly experience.

- ✓ The platform offers solutions to restore trust in cryptocurrency markets.

About ICO

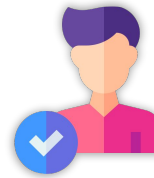

- ✓ Provides a solution to current ICO challenges in the market.
- ✓ Aims to minimize investor losses and enhance their engagement with the project.

Decentralized Stock Projects

- ✓ Decentralized distribution of returns ensures fair allocation and encourages active participation from contributors.
- ✓ Stocks enhance global access for investors, fostering diversity and global engagement in VeneraChain projects and dApp.

Attracting Validators

- ✓ Working to attract a larger number of Validators.
- ✓ Enhancing Decentralization on the VeneraChain Network.

Incentivizing Investors

- ✓ Encourages investors to stake the network's VCH token.
- ✓ Aims to minimize investor losses and make them more engaged with the project.

Investing in the VeneraChain project through the ROIC platform.

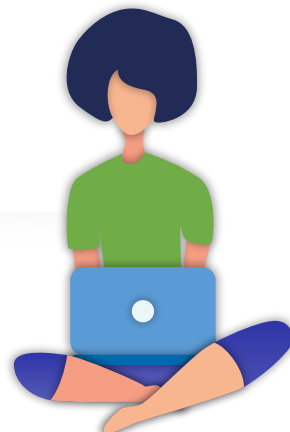

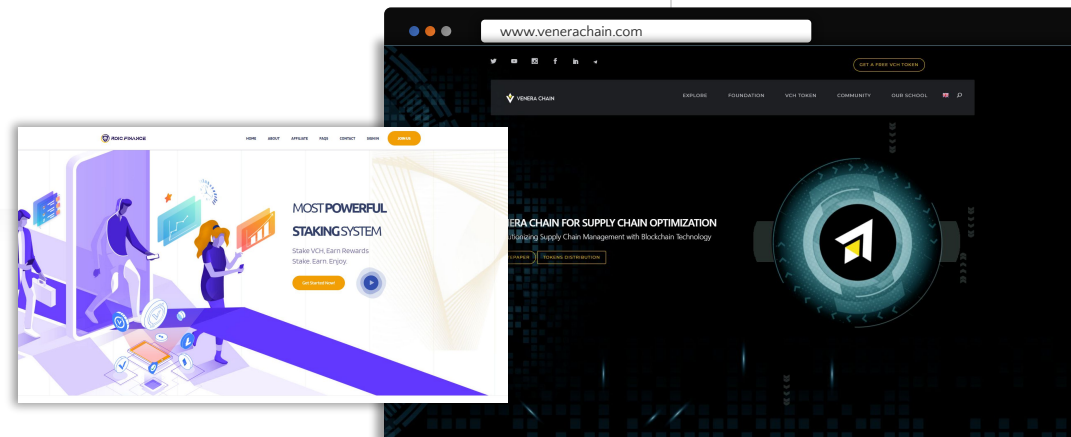

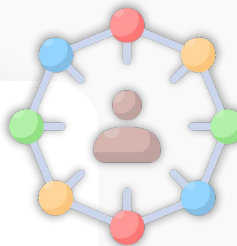

✓ When it comes to your investment, is divided into two main parts:

Part One

You will be staking your VCH token, where you can specify the staking period based on your personal preferences.

Part Two

You will receive stakes in decentralized stocks, providing you with active participation in the system and an opportunity to benefit from market developments, leading to sustainable returns and profits.

What are the gains and profits achieved by investors in the VeneraChain project through the ROIC platform?

- The key benefits that incentivize investors to purchase VCH and stake within the ROIC platform include:

Earnings from Stock Fees

Completing the VeneraChain project provides the opportunity for ongoing profits from fees by simply holding the stock.

Auto Re-stake

The platform allows investors to increase staked tokens and earn additional weekly profits for an additional period of up to 4 years even after withdrawing tokens from staking.

Weekly Reward

Weekly rewards that may reach over 100% annually.

Price Differentials

Price differentials exceed 5 times the current stage after the public sale trading phase.

Increase in Stock Value

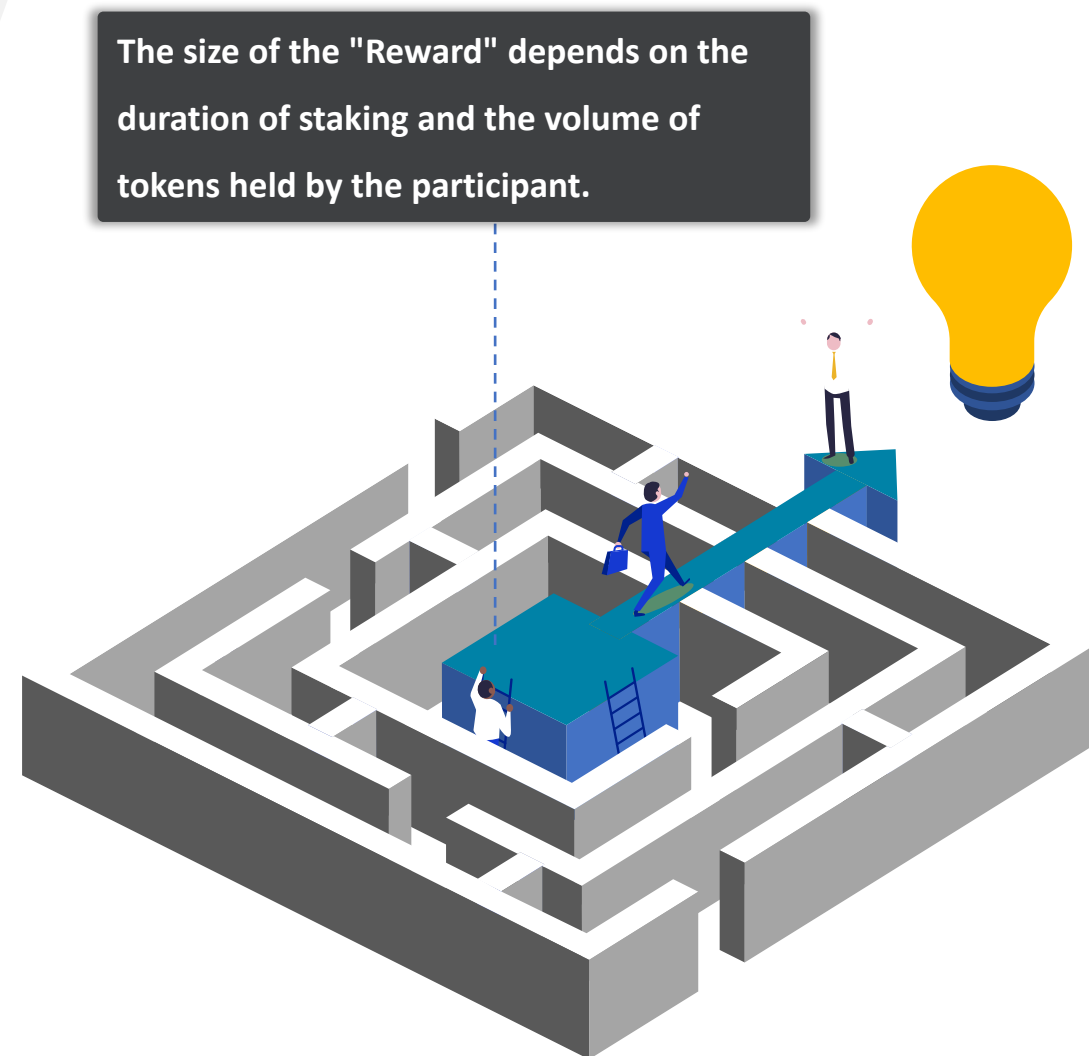

After the completion of the VeneraChain project, you can achieve excellent profits from selling the stock, given the expected increase in its value.

The First Incentive

Weekly Reward

- ✓ Anyone staking **VCH** within the ROIC platform will receive a weekly return, **potentially reaching over 100% annually.**
- ✓ The interest value varies based on the quantity of staked **VCH** and depends on the staking **factor K.**

How are Rewards Calculated?

- ✓ All funds used to purchase **VCH** by all investors within the ROIC platform go to the centralized wallet of the ROIC platform. Subsequently, they are converted into trading pairs within the platform to benefit from **Swap operations, Fees, LP (Liquidity Provider) rewards**, and then initiate the **Yield Farming** process.
- ✓ The obtained returns are divided among **all owners of VCH within the ROIC platform**.

Weekly rewards = Staked token amount × K factor.

The yield may reach up to 100% of annual profits.

Example

The weekly rewards for an individual who owns **10,000 staked VCH** with a **K value of 0.001** will be calculated as follows: **$0.001 \times 10,000 \text{ VCH} = 10 \text{ VCH}$** .

To obtain the value of K

The weekly commission amount due for an individual = The quantity of stacked VCH in the person's portfolio within the platform multiplied by the K factor.

The Second Incentive

Price Discrepancies

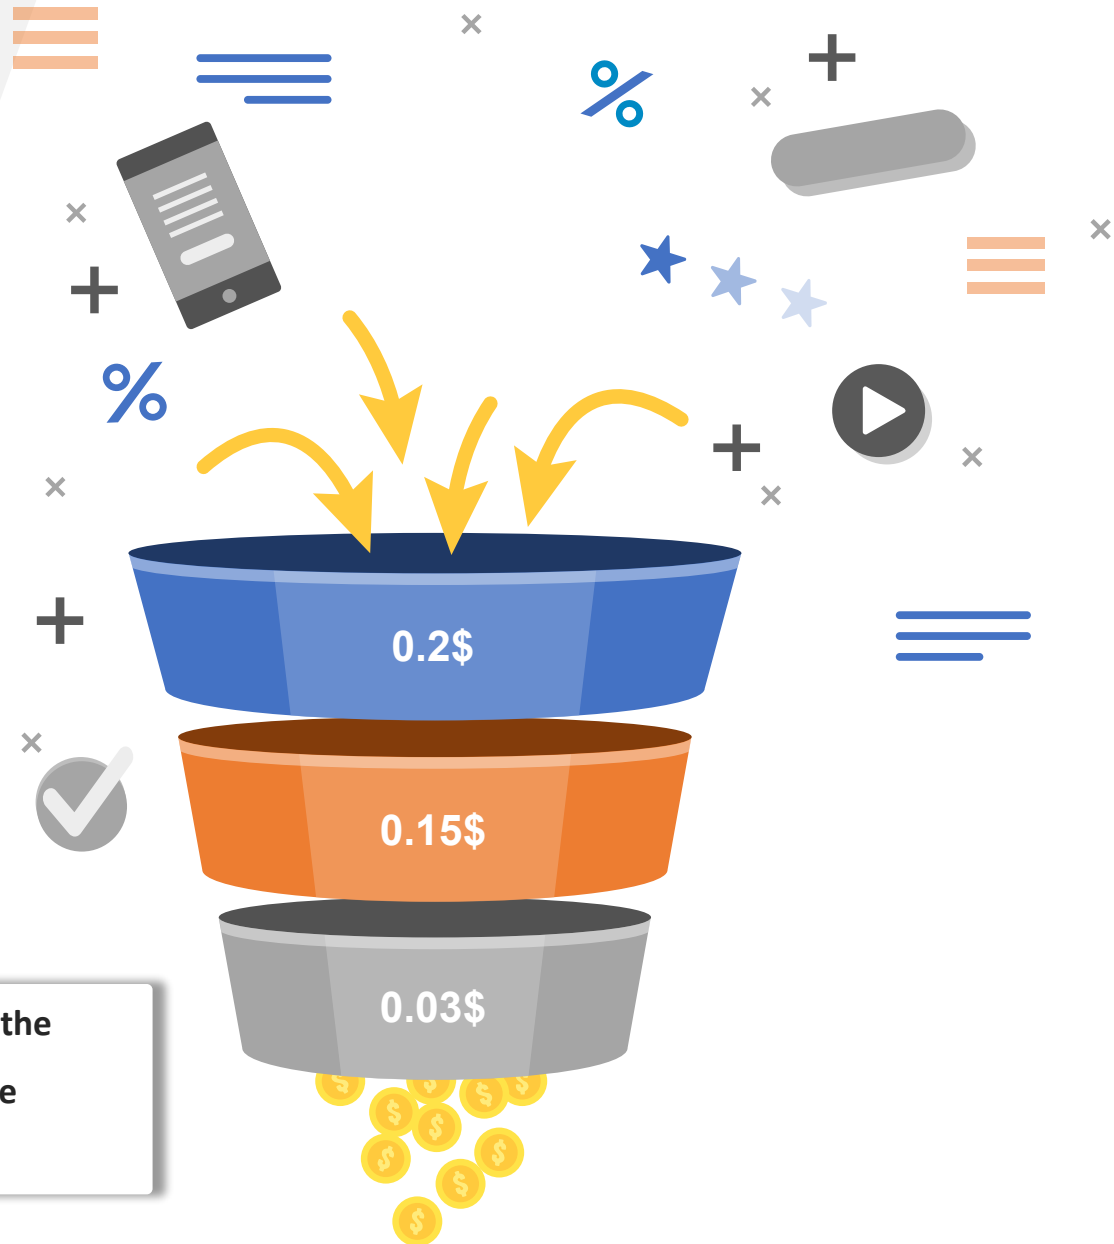

After the staking period, the participant will benefit from the token's value appreciation in addition to an increased return on investment (interest).

- ✓ The current stage is called the Seed Stage or Initial Stage, where VCH will be sold at a value of \$0.03. The suggested currency price at the beginning of trading may reach \$0.15, \$0.2, or more

An investor purchasing in the Seed Stage will see their capital multiply several times.

Example

If a person bought 10,000 VCH for \$300 for \$0.03 and assuming that in the trading stage, prices start from \$0.15, the value of 10,000 VCH would be \$1,500.

The Third Incentive

Increase in Stock Value

- ✔ **With the completion of decentralized application projects on the network and participation in the contribution plan, an increase in the stock value is anticipated. This opens up opportunities for investors to achieve excellent profits and enhance the value of their investments.**
- ✔ **This investment provides unique opportunities to achieve substantial returns and benefit from the network's continuous success.**

Investor Confidence in Market

The increase in stock value reflects investor confidence and market trust in the company's vision and strong performance.

Expectations for a Bright Future

It appears that investing in the VeneraChain project not only depends on current returns but also provides opportunities for a bright future and sustainable gains.

An Incentive Option to Enhance Portfolio

Value

Investment is considered an incentive option that enhances the portfolio value for investors.

Anticipated Increase in Stock Value

As a result of the successful completion of the decentralized application on the network, a significant increase in the value of the shares of that application is expected.

Effective Enhancements and Successful Strategic Developments

The anticipated increase is attributed to effective internal enhancements and successful strategic developments guiding the company toward a path of success and growth.

Investment Opportunities

Allows investors to retain their shares in the stock to benefit from excellent returns upon selling, showcasing the positives associated with these investments.

The Fourth Incentive

Earnings from Stock Fees

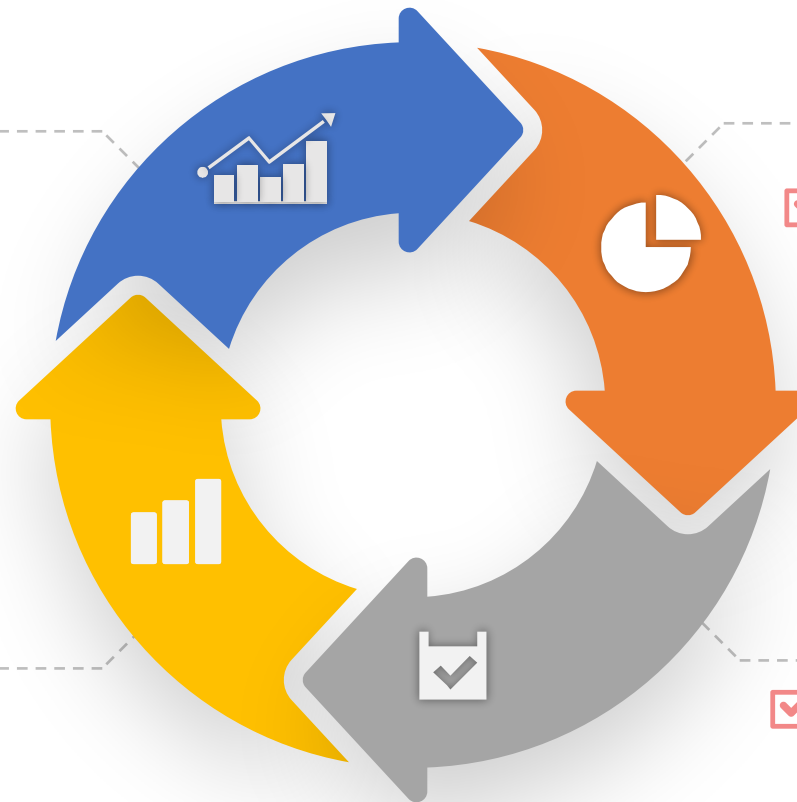

- ✓ Completing the VeneraChain project, followed by participating in decentralized applications and engaging in the contribution plan, opens up an opportunity for you to earn sustainable profits through fees, simply by holding your stake. This makes it an attractive and innovative investment.

The Opportunity to Profit from the Increase in Stock Value

- ✓ Investment is not limited to profiting solely from the increase in stock value; it also provides an opportunity to achieve sustainable profits from financial fees.

Continuous Profits through Financial Fees and Trading

- ✓ Investment provides an opportunity to achieve continuous profits from the fees generated by financial activities and trading operations within the system.

Sustainable Financial Benefits

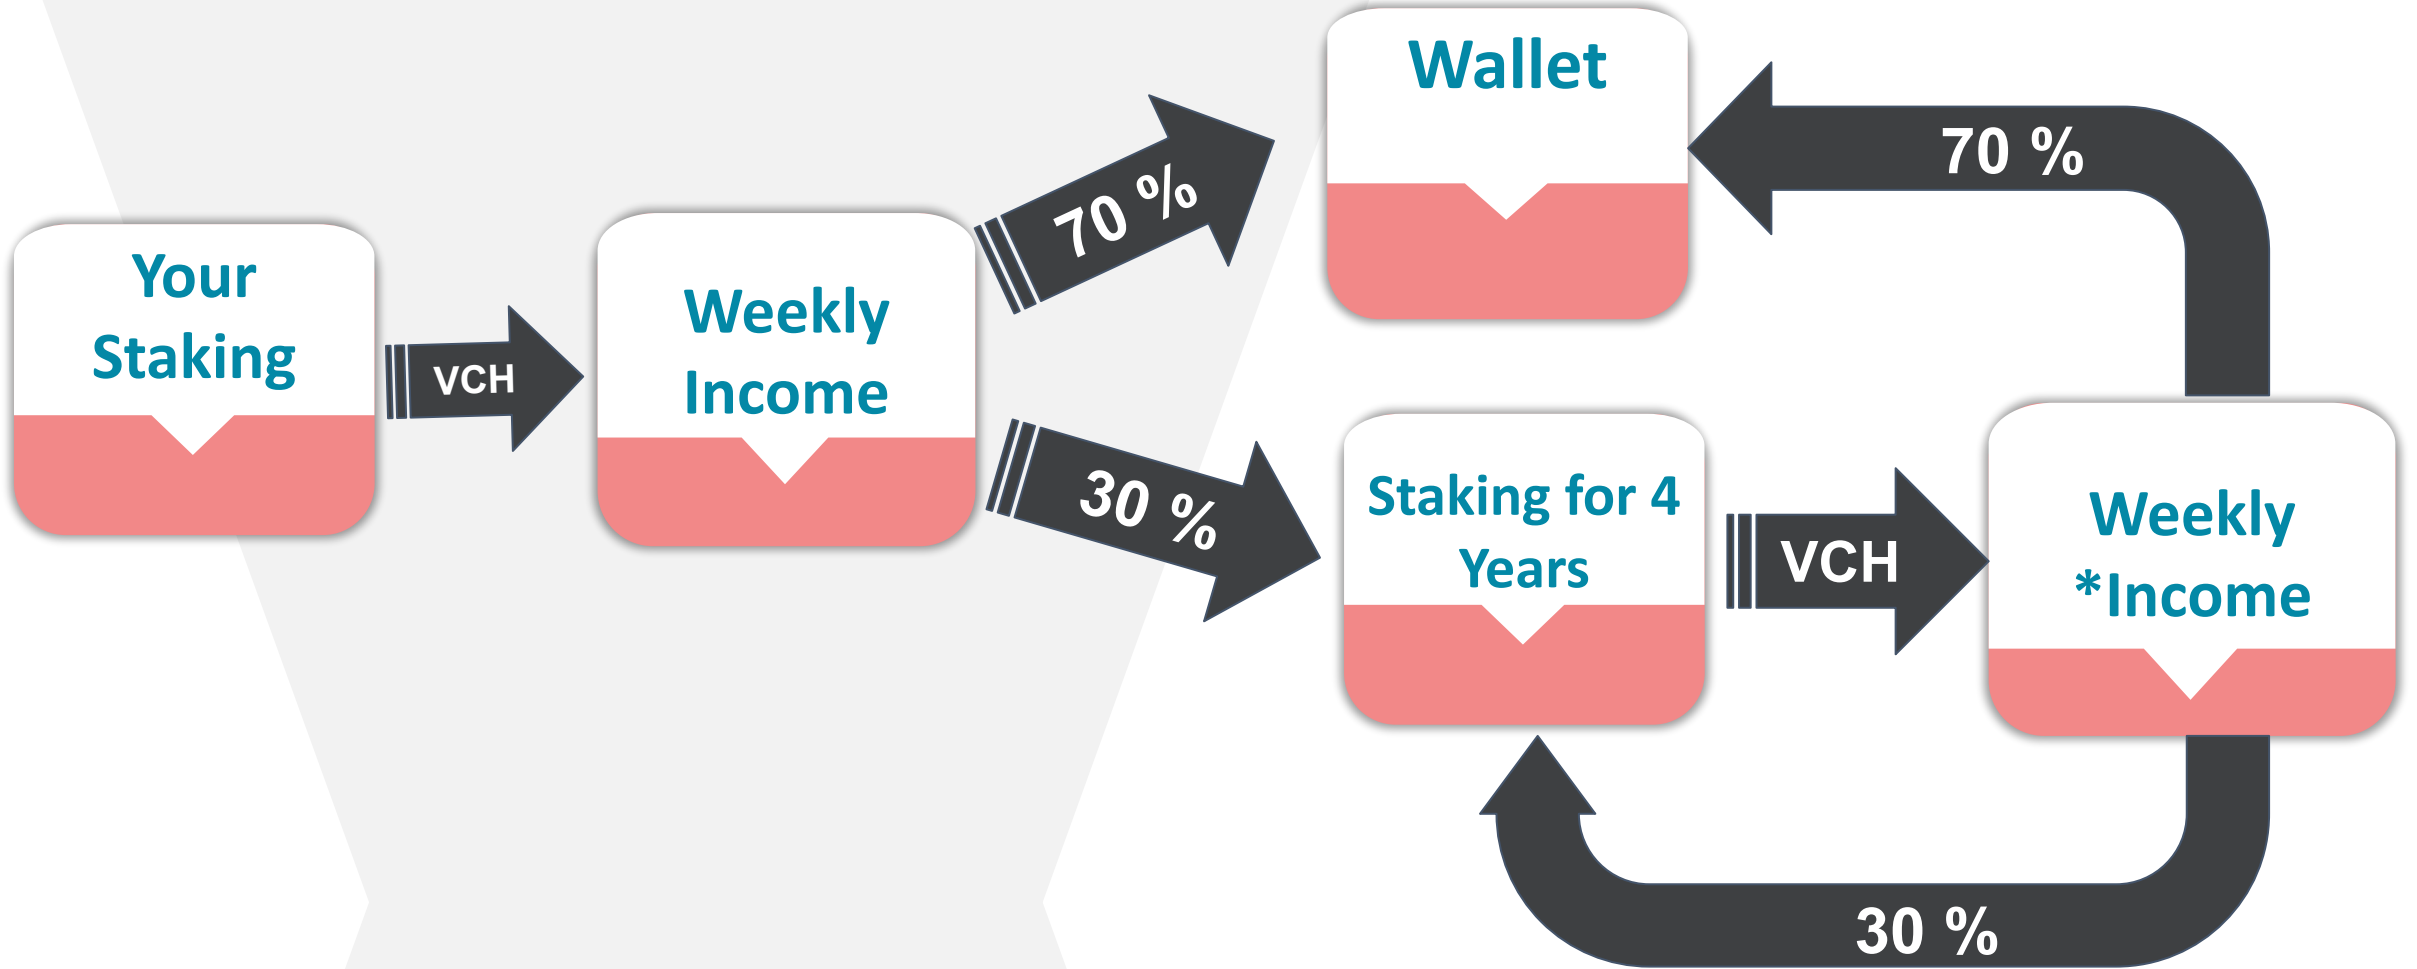

- ✓ Investors can enjoy sustainable financial benefits by earning profits from fees associated with their stake in the stock.

Percentage of Accumulated Fees

- ✓ By holding a stake in the stock, the investor becomes eligible to receive a percentage of the accumulated fees generated from the execution of transactions or operations within the system.

The Fifth Incentive

Auto Re-stake

.Read the terms of the weekly income *

The Sixth Incentive

Staking Bonus within the ROIC Platform

- ✓ The staking bonus depends on the staking period of the VCH token within the ROIC platform.
- ✓ If the token is staked for 4 years, the staking bonus can reach a profit of 20%.

Staking Period	Staking Bonus
Years 4	20%
Years 2	5%
Year 1	2%

*The staking bonus is paid once at the end of the staking period.

Participating in the VeneraChain Project from Within the ROIC Platform

Participation is done by purchasing one of the following packages, where the investor, upon purchasing, receives:

1

VCH tokens worth half the package amount*
1 VCH= 0.03\$

2

Decentralized stocks in some projects and applications will be built on the VeneraChain Stock prices for applications participating in the contribution plan depending on the nature of the project and its strategies for stock sales.

3

Obtaining a league-status position
It depends on two factors:
the staking period and the amount for the package.

.Note: A fee of up to 1.5% of the package value is deducted as service and development fees *

Purchasing VCH packages, contributing to the VeneraChain project, and then obtaining League Status positions.

	 Bronze	 Silver	 Gold	 Platinum	 Ruby	 Diamond
Staking Period Stake(Year)						
4 Years	500\$ - 749	750\$ - 999	1000\$ - 1499	1500\$ - 1999	2000\$ - 2999	3000\$ - 100,000
2 Years	1000\$ - 1499	1500\$ - 1999	2000\$ - 2999	3000\$ - 3999	4000\$ - 5999	6000\$ - 100,000
